Disorders treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension. The present sequence encodes human CLASP-2A, which is used in the exemplification of the present invention.
                 Human; autoimmune disease; haematopoietic disorder; Digeorge syndrome blood protein disorder; agammaglobulinaemia; dysgammaglobulinaemia; ataxia telangiectasia; common variable immunodeficiency; lymphopenia; thrombocytopenia; haemoglobinuria; Addison's disease; Grave's disease haemolytic anaemia; multiple sclerosis; rheumatoid arthritis; lupus; endometriosis; autoimmune thyroiditis; anaphylaxis; hypersensitivity; autoimmune pulmonary inflammation; organ rejection; inflammation; CLASP; gene; ss.
                                                                                                                                                                                              13-AUG-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                      cells. CLASP-2 polynucleotides are useful as probes or primers for on or inhibition of CLASP-2 expression (e.g., antisense or e-mediated inhibition), for gene knockout, etc. The CLASP-2 leotides can express CLASP-2 polypeptides, produce anti-CLASP-2 leotides can express CLASP-2 polypeptides. The CLASP-2 leotide or fragments can be used in diagnostics (e.g., as probes SP-2 expression), as a lymphocyte marker and for therapeutic s. CLASP-2 polynucleotides can construct transgenic and knockout e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 leotides can screen for CLASP-2 agonists and antagonists. CLASP-2 polypeptides or polynucleotides can treat deficiencies or respection, differentiation of immune cells and can treat or detect incies or disorders of haematopoietic cells. CLASP-2 polypeptides repoietic cells, including the pluripotent stem cells to treat those associated with a decrease in certain (or many) types of poietic cells. immunologic deficiency syndromes including the pluripotent stem cells including the polypeptides in certain (or many) types of the polypeptides in certain (or many) types of polypeptides in certain (or many) types of the polypeptides in cer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ARBOR VITA C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ion relates to an isolated polypeptide (I) comprising an amino once that has 90 % sequence identity to one of the human ike asymmetry protein(s) (CLASP)-2 (hCLASP-2A, 2B, 2C, 2E) (PS). (I) is useful for identifying a compound or agent that ip-2 polypeptide. An antibody (II) to (I) is useful for a CLASP-2 polypeptide in a sample. (II) is useful for a immune response in a subject. A pharmaceutical composition a nucleic acid encoding (I), or (II) is useful for preventing a CLASP-2 mediated disease e.g. an autoimmune disease, where mune disease is caused or exacerbated by increased activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      adherin-like asymmetry protein(s) (CLASP)-2 for modulating esponse, and for treating multiple sclerosis, rheumatoid endometriosis, lupus, autoimmune thyroiditis, septic shock,
                                                                               is, autoimmune thyroiditis, and autoimmune pulmonary n. CLASP-2 can be used to treat anaphylaxis or ivity to an antigenic molecules, organ rejection or graft-disease (GVHD) and inflammation. ABK84922-ABK85018 adherin-like asymmetry protein (CLASP) coding sequences and
                                                                                                                                                                                                                    in disorders (e.g., agammaglobulinaemia, bulinaemia, ataxia telangiectasia, common variable iency, Digeorge syndrome, lymphopenia, thrombocytopenia, or uria). CLASP-2 polynucleotides or polypeptides can treat or immune disease, e.g., Addison's disease, haemolytic anaemia, ease, multiple sclerosis, rheumatoid arthritis, lupus, is, autoimmune thyroiditis, and autoimmune pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            OR VITA CORP.

an immune I arthritis, and sepsis
                                                                                                                                                                         cadherin-like asymmetry protein(s) (CLASP)-2 for modulating response, and for treating multiple sclerosis, rheumatoid endometriosis, lupus, autoimmune thyroiditis, septic shock,
```

Example 4; Figure 6A; 245pp; English.

The invention relates to an isolated polypeptide (I) comprising an amino cadherin-like asymmetry protein(s) (CLASP)-2 (hCLASP-2A, 2B, 2C, 2E)
CC cadherin-like asymmetry protein(s) (CLASP)-2 (hCLASP-2A, 2B, 2C, 2E)
CC sequences (PS). (I) is useful for identifying a compound or agent that to binds CLASP-2 polypeptide. An antibody (II) to (I) is useful for detecting a clasp-2 polypeptide in a sample. (II) is useful for comprising a immune response in a subject. A pharmaceutical composition comprising a nucleic acid encoding (I), or (II) is useful for preventing correcting a clasp-2 polypeptide in a sample. (II) is useful for preventing comprising a nucleic acid encoding (I), or (II) is useful for preventing correction or inhibition of clasp-2 asyression (e.g., antisense or ribozyme-mediated inhibition), for gene knockout, etc. The CLASP-2 polypurelectides are useful as probes or primers for clasp-2 polypurelectides can be used in diagnostics (e.g., as probes for CLASP-2 polypurelectides. The CLASP-2 polypurelectides can be used in diagnostics (e.g., as probes for CLASP-2 polypurelectides can construct transgenic and knockout animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 polypurelectides can construct transgenic and knockout animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 polypeptides or polynuclectides can treat deficiencies or disorders of the immune system, by activating or inhibiting the activation, differentiation of immune cells and can treat or detect deficiencies or disorders of haematopoietic cells. CLASP-2 polypeptides can increase differentiation and proliferation of haematopoietic cells. CLASP-2 polypeptides can increase in certain (or many) types of haematopoietic cells, including the pluripotent stem cells to treat those disorders associated with a decrease in certain (or many) types of haematopoietic cells e.g., amandiated and plectasia, common variable inmune cells of the contraction of the contraction of the contraction of the contraction of the hypersensitiversus-host orepresent can and PCR prima immunodeficiency, Digeorge syndrome, lymphopenia, thrombocytopenia, or haemoglobinuria). CLASP-2 polynucleotides or polypeptides can treat or detect autoimmune diseases, e.g., Addison's disease, haemolytic anaemia Grave's disease, multiple sclerosis, rheumatoid arthritis, lupus, endometriosis, autoimmune thyroiditis, and autoimmune pulmonary inflammation. CLASP-2 can be used to treat anaphylaxis or Sequençe nsitivity to an antigenic molecules, organ rejection or graftnost disease (GVHD) and inflammation. ABK84922-ABK85018 at cadherin-like asymmetry protein (CLASP) coding sequences primers of the invention. 807 BP; 1353 A; 1117 C; 1136 G; 1201 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ESULT 5
3K84964
The invention relates to an isolated polypeptide (I) comprising an amino acid sequence that has 90 % sequence identity to one of the human cadherin-like asymmetry protein(s) (CLASP)-2 (hCLASP-2A, 2B, 2C, 2E) sequences (PS). (I) is useful for identifying a compound or agent that binds CLASP-2 polypeptide. An antibody (II) to (I) is useful for detecting a CLASP-2 polypeptide in a sample. (II) is useful for inhibiting a immune response in a subject. A pharmaceutical composition comprising a nucleic acid encoding (I), or (II) is useful for preventing
                                                                                                                                             an immune marthritis, and sepsis
                                                                                                                                                                                                                                                                      (ARBO-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             detection or inhibition of CLASP-2 expression (e.g., antisense or ribozyme-mediated inhibition), for gene knockout, etc. The CLASP-2 copynuclectides can express CLASP-2 polypeptides, produce anti- CLASP-2 polypuclectides can express CLASP-2 polypeptides. The CLASP-2 polypucleotides or are used as therapeutic polypeptides. The CLASP-2 polypucleotides or are used as therapeutic polypeptides. The CLASP-2 polypucleotides can be used in diagnostics (e.g., as probes for CLASP-2 expression), as a lymphocyte marker and for therapeutic purposes. CLASP-2 polypucleotides can construct transgenic and knockout animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 polypeptides or polynucleotides can screen for CLASP-2 agonists and antagonists. CLASP-2 polypeptides or polynucleotides can increase and can treat or detect deficiencies or disorders of haematopoietic cells and can treat or detect deficiencies or disorders of haematopoietic cells. Including the pluripotent stem cells to treat those disorders associated with a decrease in certain (or many) types of haematopoietic cells e.g., immunologic deficiency syndromes including blood protein disorders (e.g., agammaglobulinaemia, or haemoglobinuria). CLASP-2 polypencides or polypucleotides or polypeptides can treat those disease, multiple sclerosis, rheumatoid arthritis, lupus, inflammation. CLASP-2 can be used to treat anaphylaxis or disease, ananemia, or anatigenic molecules, organ rejection or graft-

""" of the polyperide of the construction of anaphylaxis or anatigenic molecules. Organ rejection or graft-

                                                                                                                 CC acid sequence that has 90 % sequence identity to one of the human CC acid sequences that has 90 % sequence identity to one of the human CC cadherin-like asymmetry protein(s) (CLASP)-2 (hCLASP-2A, ZB, ZC, ZE) compenses (PS). (I) is useful for identifying a compound or agent that CC binds CLASP-2 polypeptide. An antibody (II) to (I) is useful for CC detecting a CLASP-2 polypeptide in a sample. (II) is useful for CC inhibiting a immune response in a subject. A pharmaceutical composition CC comprising a nucleic acid encoding (I), or (II) is useful for CC comprising a nucleic acid encoding (I), or (II) is useful for preventing or treating a CLASP-2 mediated disease e.g. an autoimmune disease, where the autoimmune disease is caused or exacerbated by increased activity C of TH1 cells. CLASP-2 polynuclectides are useful as probes or primers for CLASP-2 mediated inhibition), for gene knockout, etc. The CLASP-2 C polynucleotides can express CLASP-2 polypeptides, produce anti-CLASP-2 polynucleotides can be used in diagnostics (e.g., as probes CLASP-2 expression), as a lymphocyte marker and for therapeutic colynucleotides can screen for CLASP-2 agonists and antagonists. CLASP-2 polypeptides or polynucleotides can treat deficiencies or clasp-2 colypeptides or polynucleotides can treat deficiencies or clasp-2 colypeptides or polynucleotides can treat deficiencies or clasp-2 clasp-2 polypeptides or polynucleotides can treat deficiencies or clasp-2 clasp-2 polypeptides or polynucleotides can treat deficiencies or clasp-2 clasp-2 polypeptides or polynucleotides can treat deficiencies or clasp-2 clasp-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              haemolytic anaemia; multiple sclerosis; rheumatoid arthritis; endometriosis; autoimmune thyroiditis; anaphylaxis; hypersensiautoimmune pulmonary inflammation; organ rejection: inflammation

CLASP-2 polynucleotides or polypeptides can treat or autoimmune disease, e.g., Addison's disease, haemolytic anaemia, s disease, multiple sclerosis, rheumatoid arthritis, lupus, triosis, autoimmune thyroiditis, and autoimmune pulmonary mation. CLASP-2 can be used to treat anaphylaxis or ensitivity to an antigenic molecules, organ rejection or graft-host disease (GVHD) and inflammation. Computation a CLASP-2 mediacute or exacerbated by including a CLASP-2 mediacute or exacerbated by including a CLASP-2 mediacute or exacerbated by including a CLASP-2 polynucleotides are useful as probes or primers of the autoimmune disease is caused or expression (e.g., antisense or detection or inhibition of CLASP-2 expression (e.g., antisense or cribozyme-mediated inhibition), for gene knockout, etc. The CLASP-2 complynucleotides can express CLASP-2 polypeptides. The CLASP-2 complynucleotides or are used as therapeutic polypeptides. The CLASP-2 complynucleotide or fragments can be used in diagnostics (e.g., as probes for CLASP-2 expression), as a lymphocyte marker and for therapeutic purposes. CLASP-2 polynucleotides can construct transgenic and knockout animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 polynucleotides can screen for CLASP-2 agonists and antagonists. CLASP-2 polynucleotides or polynucleotides can treat deficiencies or disorders of the immune system, by activating or inhibiting the cativation, differentiation of immune cells and can treat or detect deficiencies or disorders of haematopoietic cells. CLASP-2 polypeptides or polynucleotides can increase differentiation and proliferation of haematopoietic cells, including the pluripotent stem cells to treat those of the complex of the pluripotent stem cells to treat those of the complex of the pluripotent stem cells to treat those of the complex of the pluripotent stem cells to treat those of the complex of the complex of the complex of the pluripotent stem cells to treat those of the complex of t
                                                                                                                                                                   c or polynucleotides can increase differentiation and protein cells, including the pluripotent stem cells to treat to disorders associated with a decrease in certain (or many) types of c disorders associated with a decrease in certain (or many) types of c haematopoietic cells e.g., immunologic deficiency syndromes including the pluripotent of the control of con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 haemolytic anaemia; mendometriosis; autoimatoimmune pulmonary class, gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   an immune marthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (ARBO-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polypeptide (I) comprising an amino acid sequence that has 90 % sequence identity to one of the human cadherin-like asymmetry protein(s) (CLASP)-2 (hCLASP-2A, 2B, 2C, 2E) sequences (PS). (I) is useful for identifying a compound or agent that binds CLASP-2 polypeptide. An antibody (II) to (I) is useful for detecting a CLASP-2 polypeptide in a sample. (II) is useful for inhibiting a immune response in a subject. A pharmaceutical composition comprising a nucleic acid encoding (I), or (II) is useful for preventing or treating a CLASP-2 mediated disease e.g. an autoimmune disease, where the autoimmune disease is caused or exacerbated by increased activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Figure

The present cDNA encodes human thyroid regulated transcript (hTRG) protein which angiogenesis associated protein (AAP) of the invention. Human TR upregulated in the in vitro model of angiogenesis and is likely involved in signal transduction between receptors and kinases. M of hTRG is useful to treat diseases related to thyroid stimulatinhormone (TSH) imbalance.

CC The invention relates to an isolated polypeptide (I) comprising an amino cadherin-like asymmetry protein(s) (CLASP)-2 (hCLASP-2A, 2B, 2C, 2E) cadherin-like asymmetry protein(s) (CLASP)-2 (hCLASP-2A, 2B, 2C, 2E) comparising a CLASP-2 polypeptide. An antibody (II) to (I) is useful for detecting a CLASP-2 polypeptide in a sample. (II) is useful for comprising a nucleic acid encoding (I), or (II) is useful for comprising a nucleic acid encoding (I), or (II) is useful for preventing comprising a nucleic acid encoding (I), or (II) is useful for preventing or treating a CLASP-2 mediated disease e.g. an autoimmune disease, where the autoimmune disease is caused or exacerbated by increased activity of TH1 cells. CLASP-2 polynucleotides are useful as probes or primers for detection or inhibition of CLASP-2 expression (e.g., antisense or ribodies or are used as therapeutic polypeptides, produce anti-CLASP-2 polynucleotides can express CLASP-2 polypeptides, produce anti-CLASP-2 polynucleotides or are used as therapeutic polypeptides. The CLASP-2 polynucleotides can be used in diagnostics (e.g., as probes continuals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2 polypeptides can screen for CLASP-2 agonists and antagonists. CLASP-2 clasp-2 polypeptides or polynucleotides can construct transgenic and knockout clasp-2 polypeptides or polynucleotides can construct transgenic and knockout clasp-2 polypeptides or polynucleotides can construct transgenic and knockout clasp-2 polypeptides or polynucleotides can treat deficiencies or clasp-2 disporters of the immune system, by activating or inhibition the clasp-2 activation or inhibition.

The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, cantianaemic, haemostatic and neuroprotective activities. CLASP-2 can be used to inhibit an immune response in a subject by interfering with the cability of a CLASP-2 protein to bind to another T cell or B cell. An immune response in a subject by interfering with the cantibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat a CLASP-2 consensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory response e,g, arthritis, inflammatory bowel disease and increase caneemia, thrombocytopaenia and other blood protein disorders. Disorders treated by disrupting CLASP-2 function include multiple sclerosis, The present sequence represents a preliminary CLASP-2 nucleotide sequence, from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2000-

The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatori, hypotensive, antiinflammatory bowel disease classed activity of the transplantation rejection responses and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of THI1 cells. They can also be used to treat hypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory response e.g. arthritis, inflammatory bowel disease and increase and antended proliferation and other blood protein disorders. Disorders treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Вp

                                                                                                                                                                                                                                                                                                                                                                Chasp-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiinflammatory antiinflammatory, antiinflammatory, can be used to inhibit an immune response in a subject by interfering with the immune response in a subject by interfering and contibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, proteins and antibodies can be used to prevent or treat a CLASP-2 mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of THII cells. They can also be used to treat chypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory response e,g, arthritis, inflammatory bowel disease and increase differentiation and proliferation of cells involved in an inflammatory created by disrupting CLASP-2 function include multiple sclerosis, treated by disrupting CLASP-2 function include multiple sclerosis, contents and proliferations and pregnancy induced hypertension. The present sequence represents a preliminary CLASP-2 nucleotide contents a preliminary CLASP-2 nucleotide.
                                                                                                                                                                                                                                                                                             Query Matc

```

The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antianaemic, haemostatic and neuroprotective activities. CLASP-2 can be used to inhibit an immune response in a subject by interfering with the ability of a CLASP-2 protein to bind to another T cell or B cell. An immune response in a subject may also be inhibited by administering an

hibit an immune response in a subject by a CLASP-2 protein to bind to another T cponse in a subject may also be inhibited hich specifically binds to CLASP-2. CLASF

inhibited by administering an SP-2. CLASP-2 polynucleotides,

They can also be used to treat hypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory response e,g, arthritis, inflammatory bowel disease and increase differentiation and proliferation of haematopoietic cells e.g. to treat anaemia, thrombocytopaenia and other blood protein disorders. Disorder: treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension fine present sequence represents a preliminary CLASP-2 nucleotide sequence, from the present invention.

The present invention describes cadherin-like asymmetry protein-2 (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, cantiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, cantinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, antipolice, can be used to inhibit an immune response in a subject by interfering with the capture response in a subject by interfering an antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides, can be used to prevent or treat a CLASP-2 proteins and antibodies can be used to prevent or treat a CLASP-2 mortains and antibodies can be used to prevent or treat a CLASP-2 mortains and cativity of THII cells. They can also be used to treat hypersensitivities, prevent transplantation rejection responses and augment immune responsiveness in immunodeficiency states, inhibit proliferation and differentiation of cells involved in an inflammatory cresponse e,g, arthritis, inflammatory bowel disease and increase canemia, thrombocytopaenia and other blood protein disorders. Disorders treated by disrupting CLASP-2 function include multiple sclerosis, the present sequence represents a preliminary CLASP-2 nucleotide sequence, from the present invention.

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: FLEISCHMAN, Robert D.
APPLICANT: WHITE, Owen R.
APPLICANT: WHITE, Owen R.
APPLICANT: VENTER, John C.
TITLE OF INVENTION: DNA SEQUENCES FOR STRAIN ANALYSIS IN MYCOBACTERIUM
TITLE OF INVENTION: TUBERCULOSIS
FILE REFERENCE: 24366-2007.00
CURRENT APPLICATION UNUMBER: US/09/103,840A
CURRENT FILING DATE: 1998-06-24
NUMBER OF SEQ ID NOS: 2
SOFTWARE: PatentIN Ver. 2.1
SEQ ID NO 2
LENGTH: 4403765
TYPE: DNA
ORGANISM: Mycobacterium tuberculosis
FEATURE:
OTHER INFORMATION: CDC 1551
OTHER INFORMATION: represent a, t, c or g
